Reference Notes

DO NOT:

✕ **Do NOT give food or drink** – swallowing reflex may be impaired (dysphagia); aspiration risk.
✕ **Do NOT give any medications**, especially aspirin or blood thinners – approximately 15% of strokes are hemorrhagic, and these medications worsen bleeding.
✕ **Do NOT delay calling 101** – do not drive the person to hospital yourself unless unavoidable. The ambulance crew pre-notifies the hospital stroke team.
✕ **Do NOT ignore transient symptoms** – even if symptoms resolve (possible TIA), the person needs emergency evaluation. Approximately 40% of TIA patients have a full stroke within three months.
✕ **Do NOT allow eating, drinking, or oral medications** until a medical professional has assessed swallowing function.

Equipment needed:

— Phone to call 101 and record symptom onset time
— Pillow or support to slightly elevate the head

FAST Reference

Letter	Assessment
F	**Face** – Ask to smile. One side drooping?
A	**Arms** – Raise both arms. One drifting down?
S	**Speech** – Repeat a sentence. Slurred or unable?
T	**Time** – Note exact onset. Treatment window: 6 hours. Target: hospital within 60 min.

Even a single positive FAST sign = call 101 immediately.

Hebrew Terminology — מונחים בעברית

English	עברית	Pronunciation
Stroke	שבץ מוחי / אירוע מוחי	SHVATZ mo-KHI / ei-RU-a mo-KHI
Face	פנים	pa-NIM
